

If you're on your feet all day.

A unit, a supply room, a kitchen, a loading dock, a drive between patient homes.

A phone in your pocket and ninety seconds between one thing and the next.

THE SHIFT

Almost everything you have heard about AI assumes a keyboard and twenty quiet minutes. You have neither. So here is the whole episode in one line. **Stop typing and talk to it.**

Walk it, then talk it

Step into a quiet hallway when you are done and say what you saw.

Two minutes.

Turn that into a punch list, group it by trade, and tell me what should not wait.

Get ready before they arrive

A vendor is coming to service equipment you have not dealt with before.

Give me the eight questions I should ask this technician before they leave.

Show it a picture

A part you do not recognize. A label on a piece of equipment. A page of instructions you are squinting at.

It will not always be right, and you will know when it is not.

TWO RULES ON THE MOVE

No names, ever

Not patients, not staff, and never a photo with a patient or a chart in it. Describe the situation, never the person.

It does not know your building

It does not know that air handler is thirty years old and the part is on back order. It is a fast set of hands, not a replacement for knowing what that noise means.

Same three things, said out loud

Who it should be, what is going on, what you want back. You are just saying them instead of thumbing them in on a phone.

YOUR CHALLENGE THIS WEEK

Next time you finish a walkthrough, write nothing down. Step somewhere quiet when you are done, tap the microphone, and talk for two minutes.

Then ask for the clean version.

Before you send anything, read it. You are the pilot. AI is the co-pilot. Every decision still goes through you.

Next episode · **If you work at a desk.** The same idea for a queue that refills while you look at it.
